

Case Study: Strategic AI Adoption Analysis for a Global Tech Consulting Firm

Objective

Your firm is advising companies on where to invest next in AI-based tools. You have access to a dataset showing global adoption of AI tools across industries and demographics. Your goal is to identify:

1. High-growth industries for AI investment
2. Countries with rising adoption trends
3. Preferred tools by age group and company size
4. Usage insights from adoption rate & active users
5. Actionable recommendations for product-market fit

Dataset: [ai adoption dataset.csv](#)

[Colab file](#)

Column Descriptions

Column Name	Description
country	Country where the organization or user is located (e.g., USA, India, China, etc.)
industry	Industry sector of the organization (e.g., Technology, Healthcare, Retail, etc.)

ai_tool	Name of the AI tool used (e.g., ChatGPT, Midjourney, Bard, Stable Diffusion, Claude)
adoption_rate	Percentage representing the adoption rate of the AI tool within the sector or company (0–100)
daily_active_users	Estimated number of daily active users for the AI tool in the given context
year	Year in which the data was recorded (2023 or 2024)
user_feedback	Free-text feedback from users about their experience with the AI tool (up to 150 characters)
age_group	Age group of users (e.g., 18-24, 25-34, 35-44, 45-54, 55+)
company_size	Size category of the organization (Startup, SME, Enterprise)
